TRAINING COURSE

INDIAN WATER WORKS ASSOCIATION

INDIAN WATER WORKS ASSOCIATION ANNOUNCES

3rd TRAINING COURSE IN RAIN WATER HARVESTING

Water is a big hue & cry for drinking water in our cities. Sanitization is leading to overexploitation & pollution of water which leads to water scarcity, whereas on the other hand the cost of water increases every day.

Water scarcity has created several questions which need to be addressed in a systematic fashion to bring the situation under control viz.

Can we augment depleting ground water?

How to ensure continuous availability of water?

How can the load on Municipal water supply be reduced?

How can we minimize flooding in urban areas when there is excess rain for a short duration or when there is high tide? (For example on city like Mumbai)

Get the answers to these questions from this 2 day training course to be organized by Mumbai Centre of Indian Water Works Association.

Indian Water Works Association (IWWA) Mumbai is a non profit organization established in 1968 by engineers from the Engineers Department of Municipal Corporation of Mumbai & Brihan Mumbai Licensed Plumbing Association, under the leadership of then Municipal Hydraulic Engineer D.R.Bhise to give a platform to engineers, consultants, environmentalists & contractors from the field of Water & Sewerage to interact with each other to find solutions to the problems in the field through its 27 centers all over India. IWWA promotes the latest trends & technologies in water treatment, water supply, waste water treatment, eco-sanitation, environment, pollution control, holding seminars, workshops & Conferences at National & International levels. A quarterly journal is published to give a chance to our members to publish their research papers, case studies etc. to all working in these fields. IWWA has collaboration agreement with American Water Works Association (AWWA) USA, to print their standards related to water treatments in India for Indian engineering. IWWA has also entered in MOU with International Water Works Association (IWWA) UK, to hold workshops on eco-sanitation in India,

as well as supply of material for Ecosan projects in India. IWWA is also has collaboration with Japan Water Works Association (JWWA), Japan, for latest technologies in these fields. IWWA is also member of Global Water Partnership (GWP) under United nations.

Who should attend this training?

Engineers from Municipal Corporation, PHED, PWD, Architects, Urban Planners, Policy Makers, Environment Consultants & other Government officers who are interested in knowing theory, practice & policies of Urban Rain Water Harvesting.

Course Contents:

- * India's rich tradition of rain water harvesting & current paradigms.
- * Understanding basics of groundwater hydrogeology.
- * Planning, designing, construction process, maintenance & monitoring Mechanisms for costing, water quality issues, treatment options, filters etc
- * Models for Residential & Institutional buildings, colonies, industries, public areas like Parks, Airports, Afforested areas etc.
- * Water policy & Legislation : Fiscal incentives & disincentives.
- * Strategies for catalyzing rain water harvesting, Experiences & Examples

Tools:

Classroom lectures by experts, site visit to rain water harvesting projects in city, practical exercises by participant in designing of a model RWH scheme.

This 2 day training will equip participants with planning & designing skills of rain water harvesting for storing of rain water for direct use & Techniques for Ground water recharge.

Participants will be given certificate of participation from Indian Water Works Association.

Course fee : Rs 2000/- per participant

Rs 1500/- for IWWA members.

Venue : Conference hall of IWWA at IWWA head quarters bldg., Pipeline Road, Santacruz (East), Mumbai 400 055
Contact No.- 26672665 / 26672666.

Date : 12th & 13th Nov 2011 (Timing: 9.30a.m. to 5.30p.m.)

Details available on Website: www.iwwa.info
